DREGREES

DEGREE IN VIDEO GAME CREATION AND STORYTELLING

2021 | 2025

Francisco de Vitoria University

MASTER'S DEGREE IN VIDEO GAME DEVELOPMENT

September 2025 | September 2026

Complutense University of
Madrid

FRONTEND

- C++, C#, Python
- Consumption of REST APIs (basic)

WORK TOOLS

- GIT & GitHub
- Perforce
- Unreal Insight
- Visual Studio / JetBrains Rider
- Jira / Jenkins

ENGINES

- Unreal Engine 5
- Unity

DEVELOPMENT

- Algorithms & data structures
- Performance profiling optimization
- Debugging and technical problem-solving
- Testing & QA
- Debugging & bug fixing

SOFT SKILLS

- Teamwork
- Problem solving
- Communication
- Adaptability & iteration

LANGUAGES

- Spanish
- English
- German

FRANCISCO PIEDRA

Gameplay Programmer | Technical Designer

Rendering & Graphics Programming

SOBRE MÍ

Software Developer focused on gameplay systems, Unreal Engine 5 and real-time graphics. I have first experience working with C++ and Blueprints, or with Unity and C#, specializing in debugging, performance analysis, and technical troubleshooting.

I worked on Rat Race, an Unreal Engine 5 title released on Steam, where I contributed in multiple ways due to it being a small team—though it was fun and quite eye-opening, given the work involved and the experience gained and shared.

My background combines gameplay programming, system design and collaboration with designers and artists. Whether thinking on core mechanics or addressing low-level graphics pipeline bottlenecks, I work closely with my teams.

ESPECIALIZACIONES

- C++ and Blueprint integration
- DirectX 11 / DirectX 12 and SM5 / SM6 workflows
- Unreal Engine 5 rendering workflows
- Performance profiling optimization
- Materials, shaders and lighting troubleshooting
- Git, GitHub, Perforce and version control workflows
- Object-oriented programming, algorithms and data structures
- Debugging, bug fixing and technical problem solving
- Teamwork, communication and adaptability
- Testing, QA and code reliability

EXPERIENCIA

RATRACE — UNREAL ENGINE 5 PROJECT

Gameplay Programmer/Technical Designer | October 2025 - July 2026

Rat Race is a time-trial arcade driving game developed in Unreal Engine 5 and released on Steam. This game/project covered: gameplay systems; modular tools; UI/gamepad interaction; telegraphy and technical matters solving across all the production.

During the final stages of development, I investigate a shader resource limitation in complex water materials under DX11/SM5 as well as addressing how it functions both within and outside the UE5 engine and took care of moving the relevant rendering workflow to DX12/SM6. I also worked on lighting issues, particle-related performance hitches, texture optimization and render-distance problems, alongside general debugging, testing and performance work.

WONDERS OF THE DEEP (UNITY)

Personal / Independent Project — Published on Steam | 2023 - 2025

Wonder of the Deep is an independent project published on Steam in which I worked as one of the main programmers. My contribution focused mainly on gameplay systems and AI behaviour, especially the development of an optimized flocking system used to simulate groups of fish moving naturally through the underwater environment. I implemented behaviours such as separation, alignment and cohesion, and improved performance by applying a spatial grid approach to reduce the cost of neighbour detection. This project helped me strengthen my understanding of simulation systems, performance-conscious programming and AI behaviour implementation in Unity using C#.
